Instant Account — Official Program Rules

The Instant Account model gives traders **direct access to a Live NYS trading account**, without the need to complete any evaluation phases.

This program is designed for traders who want to start trading immediately while operating under **clear and professional risk management rules**.

From the moment the account is activated, traders operate under real trading conditions while maintaining responsible risk management.

The Instant model combines **immediate access to trading capital with structured safeguards** designed to promote sustainable and disciplined trading.

The objective is simple:

Demonstrate consistent trading performance while respecting responsible risk management.

---

1. Risk Management

To maintain a stable and responsible trading environment, two risk limits apply:

- **Max Daily Loss**
- **Max Loss**

Traders may use any strategy as long as these limits are respected.

Traders are responsible for monitoring their own account equity and risk levels at all times.

Risk limits are enforced automatically by the trading system.

Max Daily Loss Limit — 3%

The Instant account includes a **Max Daily Loss Limit of 3%**.

At the start of each trading day, the system records the **higher value between the account balance or account equity**.

The allowed Max Daily Loss equals **3% of that value**.

All calculations are based on **equity**, meaning both closed trades and floating profit or loss from open positions are included.

Example

Account balance: **$100,000**

Max Daily Loss Limit: **$3,000**

The Max Daily Loss represents the maximum amount the account equity can decrease during a single trading day.

This means the account equity must not reach or fall below **$97,000 at any time during the trading day.**

If this level is reached, the account will be **automatically closed**.

Daily Reset

The Max Daily Loss Limit resets automatically when the trading server resets.

The reset occurs at the daily market rollover (New York close / server reset).

This corresponds approximately to:

- **21:00 UTC**
- **22:00 CET (Central European Time)**
- **01:00 GST (Gulf Standard Time – UAE)**
- **02:30 IST (India Standard Time)**

Each new trading day begins at this moment with a **fresh daily loss limit**.

Max Trailing Loss — 5%

To ensure strict capital protection, the account is subject to a **Max Trailing Loss of 5%**, based on an **equity trailing mechanism.**

- The maximum overall loss allowed on the account
- Based on a trailing equity mechanism
- The limit moves up as new equity highs are reached
- It never moves down
- Applies at all times
- Does not reset

If the **trailing limit is reached** at any time, the account will be **automatically closed.**

This rule helps ensure **long-term stability and responsible risk management**.

Practical example — Max Trailing Loss (5%)

Initial account balance: $100,000

Initial loss limit (5%): $95,000

During trading, the account reaches a new equity high of $104,000.

At that moment, the loss limit is dynamically adjusted to $99,000.

Later, the equity declines to $99,000.

Upon reaching this level, the Max Trailing Loss rule is triggered, resulting in the automatic closure of the account.

Maximum Open Risk — -1%

To ensure consistent and disciplined trading, the total floating loss across all open positions must remain within 1% of the account balance at all times.

Floating loss refers to unrealized losses from active trades.

Reaching this limit will result in a rule breach and the account will be closed.

This safeguard is designed to promote smart exposure, prevent over-risking, and support long-term trading performance.

15% Consistency Rule

To encourage sustainable trading performance, the most profitable trading day cannot exceed 15% of the total profit generated.

If this condition is not satisfied, trading may continue until the requirement is met.

2. Max Risk Per Trade Idea

Max Risk Per Trade Idea (Account-Based)

The maximum risk allowed per trade idea is **2%** maximum risk per trade

Risk refers to the **maximum potential loss of a trade**, usually determined by the stop-loss level.

If no stop-loss is used, risk may be evaluated based on:

- The same instrument
- The same trading direction
- Trades opened within a short time window

A trade idea is defined as:

- The same instrument
- The same direction
- Trades opened within a short time window

Splitting positions to bypass the risk limit is not allowed.

Splitting a position into multiple entries to exceed the permitted risk is **not allowed**.

To ensure trades are considered separate ideas, there must be **at least 5 minutes between entries in the same direction on the same instrument**.

This rule **does not restrict scalping**. Traders may still open multiple trades quickly, but those trades will be considered part of the same trade idea for risk calculation purposes.

Maximum Exposure per Instrument

To maintain balanced risk management, the total risk on a single instrument should **not exceed 4% of the account balance**.

Example

Account balance: **$100,000**

Maximum exposure per instrument: **$4,000**

Opening several trades on the same instrument that together exceed this amount may be considered excessive concentration of risk.

If this occurs, the trader may simply be asked to **reduce exposure or adjust positions** to return within the allowed limits.

This rule helps promote **balanced and sustainable trading across different markets**.

Responsible Trading Behavior

The Instant program encourages **realistic and responsible trading practices**.

Examples of behavior that are not compatible with the program include:

- Extreme over-leveraging
- Trading without defined risk management
- Strategies designed purely to maximize short-term results while ignoring sustainability

If such situations occur, the account may be reviewed.

Depending on the circumstances:

- The trader may receive a warning

- Temporary trading restrictions may be applied
- Or the account may be closed if the rules are clearly violated

These measures help ensure **fair conditions for all traders in the program**.

Consistent Risk Behavior

Trading activity must reflect consistent risk management.

Significant and abrupt increases in position size, lot size, or exposure that are not aligned with previous trading behavior may be considered excessive risk-taking.

In such cases, the account may be reviewed, and appropriate action may be taken.

Min Profitable Days

Traders must achieve at least 7 profitable trading days within each 30-day period.

A profitable day is defined as a day where the net profit is at least 0.25% of the initial account balance.

This requirement must be met before submitting a payout request.

---

3. Trading Conditions

The Instant account allows traders to operate with flexibility while respecting the risk rules described above.

Available Markets

Traders may operate in the following markets:

- Forex

- Indices
- Metals
- Energies
- Cryptocurrencies

Maximum leverage: **1:50**

Trading costs (spreads and commissions) are those displayed directly on the trading platform.

Trading Flexibility

The following approaches are permitted:

- Manual trading
- Personal trading strategies
- Expert Advisors (EAs)
- Scalping
- Intraday trading
- Swing trading

The program does not restrict trading style **as long as risk management rules are respected**.

---

4. Restricted Trading Practices

To maintain a fair and sustainable trading environment, certain practices are not compatible with the program.

These include:

• arbitrage strategies exploiting pricing errors
• latency arbitrage
• high-frequency trading (HFT)
• tick scalping designed to exploit execution delays
• server spamming or excessive order activity
• coordinated hedging across multiple accounts
• reverse trading strategies designed to bypass risk rules

Accounts must represent **independent trading activity**.

Any strategy designed to exploit **platform errors, pricing anomalies, execution delays or technical infrastructure limitations** may result in account suspension.

Third-Party Trading

Accounts must be operated exclusively by the **registered trader**.

The following activities are not permitted:

• account sharing
• external copy trading services
• third-party account management
• selling or transferring account access

Expert Advisors are allowed only when used as part of the trader's **own trading strategy or risk management system**.

---

5. News and Weekend Trading

News Trading

To ensure fair trading conditions and protect traders from extreme market volatility, trading around major high-impact economic news events is restricted.

Traders are not permitted to open new positions within a 10-minute window surrounding the release of major high-impact news, which includes:

- 5 minutes before the scheduled news release
- 5 minutes after the scheduled news release

During this period, opening new trades is not allowed. However, positions opened before the restricted window may remain open and can be managed normally.

Example

If a major economic event, such as U.S. Non-Farm Payrolls or an FOMC Interest Rate Decision, is scheduled at 8:30 PM:

- New trades should not be opened between 8:25 PM and 8:35 PM
- Traders may open positions before 8:25 PM or after 8:35 PM

Weekend Holding

Holding positions over the weekend is permitted.

However, traders should be aware that **market gaps may occur**, which can significantly impact open positions.

Proper risk management remains the responsibility of the trader.

---

6. Profit Withdrawals (Payouts)

The Instant Account allows traders to request payouts according to a structured schedule.

Payout Schedule

The first payout request can be submitted **30 days after the first trade is executed**.

After that, payouts may be requested **every 14 days**.

Profit split: **80%**

To request a payout, traders must achieve a minimum net profit of 3% of the initial account balance.

Transfer fees or currency conversion fees may apply depending on the payment method.

Trade Validation

To request a payout:

• only **closed trades** are considered
• **no open trades** may remain when submitting the request
• official records from the trading platform and server are used for validation

---

7. Verification and Review

Before approving payouts, a compliance review may be performed to confirm that:

• all risk rules were respected
• no restricted trading practices were used
• trading activity reflects independent trader behavior

If all rules were respected, the payout request will be **approved and processed**.

Identity Verification (KYC)

Identity verification may be required before processing payouts.

This may include:

- Government-issued identification
- Basic account verification

This is a **standard security and compliance procedure**.

---

8. Account Security

Each account must be operated exclusively by the registered trader.

For security and compliance purposes:

- Account credentials must not be shared
- Accounts may not be traded by third parties
- Selling or transferring account access is not permitted

These measures ensure that every account reflects the trading activity of the registered user.

---

9. Account Activity

To maintain an active account, at least **one trade must be opened every 30 days**.

Accounts with no trading activity during this period may be automatically suspended.

---

10. Trading Location

Traders may access and trade their accounts from different locations, devices, or networks.

This includes trading while traveling, using different internet connections, or switching between devices.

If the system detects unusual or inconsistent access patterns (for example rapid location changes or activity suggesting shared access), additional verification may be required.

These checks are standard security procedures designed to protect the account and confirm it is operated by the registered trader.

---

11. Account Merging

The Instant model **does not allow account merging**.

Final Note

The Instant Account model is designed to give traders **immediate access to Live trading** while maintaining strong risk management standards.

Traders who follow the rules, manage risk responsibly and trade consistently will be able to continue operating and request payouts under a **clear and transparent structure**.
